===== Forwarded message =====

Dan,

The short answer is that “ADA compliant” software typically means aligning with the [Web Content Accessibility Guidelines \(WCAG\)](#). That’s the standard most organizations (and courts) look to when evaluating digital accessibility, especially for users with low or no vision. Attached is an older document that was shared with me when we contracted with our website developer, it may or may not be helpful.

The nuts and bolts of accessibility for an event site:

1. Screen reader compatibility

- Ensure full usability with tools like JAWS, NVDA, and VoiceOver
- All buttons, forms, and links need clear labels (no vague “click here”)

2. Keyboard-only navigation

- Users should be able to complete *every action* (donate, bid, register) using only a keyboard
 - Logical tab order and visible focus indicators are critical
3. Forms
 - Every field must have a properly associated label
 - Required fields clearly identified
 - Error messages announced to screen readers and easy to understand
 4. Color and contrast
 - Text must meet contrast ratios (generally 4.5:1 for normal text)
 - Don't rely on color alone (e.g., red errors) to convey meaning
 5. Alternative text
 - All images (auction items, logos, buttons) need descriptive alt text
 - Decorative images should be marked so screen readers skip them
 6. Structure and headings
 - Proper heading hierarchy (H1, H2, etc.) so users can navigate quickly
 - Use semantic HTML (not just styled)
 7. Dynamic content / live bidding
 - If you have real-time updates (like auction bids), use ARIA live regions so screen readers announce changes
 8. PDFs and receipts
 - Ensure generated receipts/statements are accessible (tagged PDFs, readable order)
 9. Mobile accessibility
 - Works with screen readers on phones (VoiceOver, TalkBack)
 - Buttons large enough and properly labeled
 10. Testing
 - Automated tools help, but you will need real user testing, especially with blind users. Our team is happy to test pieces and parts, but if you want a comprehensive stamp of approval consider contracting with Patrick Vanderhorst at the Lighthouse Central Florida to test your site for a very reasonable fee and even give you a seal of certification: patrick.vanderhorst@lighthousecfl.org.

I'm excited for this product! It is needed!

Thanks Bryson!

Hi Jeanie,

Bryson may have told you that I am building a fundraising software to try and provide a product better than what I've seen on the market in the last 10 years. I need to make sure that our software is ADA compliant and meets the requirements for individuals with low or zero vision. Hoping we can chat or maybe you have a list of requirements? Let me know. Thanks so much!

Best,

Dan Lyles

Subject: Event Platform Accessibility

Hey Dan!

I wanted to connect you with Jeanie Farmer, our Chief Operating Officer. The two of you may have met at Noir/Nera in the past. Jeanie can speak to what we're "looking for" in the accessibility department and then connect you with someone for testing.

Looking forward to seeing what you've got in the works!

Bryson
